languages

Dutch
English
Norwegian
German
French

skills

Sensor Technology
Mechatronics
System Control:
(Labview, Beckhoff)
Embedded Systems:
ASM, C
3D design

interests

emerging technologies
anomaly detection
teaching

education

- 2001–2002 **Engineering and Life Sciences** (parttime) HAN University of Applied Sciences, Arnhem
Automotive Engineering
- 1993–1998 **Industrial Design** (No Degree) TU Delft
Material sciences, ergonomics, mechanical and electrical engineering, Human machine interaction
- 1992–1994 **Applied Earth Sciences** (propedeuse) TU Delft
Petroleum Engineering and Geosciences, Geoscience and Remote Sensing

experience

- 2011–2013 **INCAS³** Assen, The Netherlands
Various Functions:
INCAS³ is an independent, private, non-profit research institute dedicated to solving challenging industrial and social technological problems.
Functions and Responsibilities:
- Industrial Researcher
 - Designed and developed test setups to prove scientific theories.
 - Forming links between science and industry and in this process transform (part of) the solutions into products ready for manufacturing.
 - Managing and Engineering in Dutch and European collaborations:
 - * SPRINT
 - * SMARTBOT
 - * MoreWise
 - Supported Phd's and Master students involved in the projects.
 - Interim Head of engineering
 - Getting the engineering department up to date on the future in production and sensor technology.
 - CTO, Otigy (Daughter company of INCAS³)
 - Professionalized a functional prototype developed at INCAS³ and made it ready for mass production.
 - Managed production of the first 400 prototypes installed in a citywide sensor network: (www.sensorcity.nl)

- 2006–2011 **Technologies88** Amsterdam, The Netherlands
CTO
Technologies88 specialized in the development of innovative technology to aid processes in the fields of Sport, Health and Industry where critical decisions need to be made in realtime.
In 2010 a fully embedded golf training device was launched: The Digital Golf Coach. The Digital Golf Coach used an 3axis accelerometer to analyze the Golf swing and compare it to your personal best.
Functions and Responsibilities:
- Develop Electronics and Low level software.
 - Sourcing components and materials.
 - Develop test system and protocols for developed hardware.
 - Write and manage patent applications for found innovations.
 - Make product ready for production (Design enclosure, User Manual, Production tools).
 - Manage production in Europe and China.
- 2003–2005 **Wireless Playground b.v.** Rotterdam, The Netherlands
Co-Founder
Wireless Playground was founded as a vehicle to develop and introduce new gadgets.
In 2004 the WiPla RDS module was introduced, a battery powered sound module remotely controllable via RDS.
This module enabled wireless control throughout most of Europe via cheap FM broadcasts.
Functions and Responsibilities:
- Designing proof of concept and making it ready for mass production.
 - Partners: Philips RF, Elan Microchip Co, Sanyo.
- 2002–2014 **Technology Playgroup Europe B.V.** Dieren, The Netherlands
Founder
European daughter company of Technology Playgroup Inc, founded to better serve the European market.
Together with Technology Playgroup Inc. many products where developed for the Film and the Medical industry.
- Sensorbox
 - DataGlove
 - CanCoder
- 2001–2002 **Technology Playgroup Inc.** Montreal, Canada
Team leader Development team
Technology Playgroup Inc. developed of a wireless sensor system for motion capture and interactive media using the latest sensor technology.

patents

- WO2009034189A1, Training apparatus
- WO2011139153A1, Device and method for motion capture and analysis
- US7862522, Sensor glove
